*Speakers of the House Since 1976*SM

Inwall Speaker Installation Instructions:

- 1) Place the cardboard cutout template on the wall where you want the speaker to be mounted.
- 2) Draw around the template and cutout the speaker mounting hole.
- 3) Run quality speaker wire (12-16 gauge) to that location.
- 4) Separate the speaker section of the inwall from the mounting frame by removing the screws around the perimeter of the front baffle.
- 5) There are six screws around the inside perimeter of the mounting frame. These screws connect to 'wings' in the rear of the frame which will swing out and clamp the mounting frame to the wall as they are tightened. Place the mounting frame into the speaker mounting hole and secure it to the wall by gently tightening the six mounting screws until the mounting frame is secure.
- 6) Connect the speaker wire to the binding posts on the speaker section and insert the speaker section back into the mounting frame.
- 7) Reattach the speaker section to mounting frame and attach grille.
